

Maintain control until close. And beyond.

We understand you. Always in complete control, before and during theatre – everything just as you need. Whilst in your hands, patients have the best chance of a great outcome. But what happens when you leave theatre? With **PICO** therapy, you can keep control of your patients' recoveries by significantly reducing the risk of postoperative wound complications.¹ As our most advanced incision management device, **PICO** therapy helps protect your patients and your work, whilst optimising post-op healing.

PICO[◇] Therapy. Leave nothing to chance.

In a meta-analysis of patients with risk factors for surgical site complications, the PICO[◇] system significantly reduced the odds of surgical site infection by 63% compared to care with standard dressings; $p < 0.00001$; meta-analysis of 19 studies (odds ratio (OR): 0.37)

1. Saunders C, Nherera LM, Horner A, Trueman P. Single-use negative-pressure wound therapy versus conventional dressings for closed surgical incisions: systematic literature review and meta-analysis. *BJS Open*. 2021;5(1):1–8.
