

# The Hidden Epidemic

Wounds are **expensive** and affect everyone.

NUNAVUT WOUND CARE SPENDING: **\$40 million<sup>2</sup>** DIRECT COSTS

**50% of nursing visits<sup>3</sup>** involve wound care delivery in the community

**35% of persons<sup>4</sup>** receiving community care have a chronic wound

**26% of persons<sup>4</sup>** in an acute or non-acute setting have a pressure injury

**Preventing and treating wounds** must be a **priority** within health care.

**Patients and their families** need to know more about wound prevention and self-management.

Health-care professionals need **training** to learn and implement best practice.

Best practice-based wound prevention and care **will save money.**
