**Steps for Healthy Feet**

**General Health**
1. Control your blood glucose levels.
2. If you smoke, quit.
3. Exercise daily as directed by your health-care professional.

**Caring for Your Feet**
1. Look for signs of redness or blisters on your feet. These show your shoe may not fit properly.
2. Wash your feet daily. Dry well, especially between your toes. Apply a moisturizer to your feet but not between your toes.
3. Do not soak your feet.
4. If you are unable to reach your toes or do not have feeling in your feet, have a health-care professional trim your toenails for you.

**Footwear**
1. Shake out your shoes before you put them on.
2. Wear shoes at all times, indoors and out.
3. Buy shoes with closed toes, as they better protect your feet from injury.
4. Change your socks every day.
5. Buy shoes late in the day, as feet tend to swell.
6. Have your shoes professionally fitted by a footwear specialist.

**Make the most out of your visit with your health-care professional by asking these 3 questions:**

1. What is my main problem?
2. What do I need to do?
3. Why is it important for me to do this?

**National Patient Safety Foundation**
