Coloplast

Intertrigo presents a challenge for both patients and health-care professionals. Patients are in pain and, if left untreated, this can lead to secondary infection. For health-care professionals, traditional treatments are messy and often ineffective because they only target one or two of the four causes (moisture, friction, bacteria, fungus). InterDry® with FourFold Technology™ simul-

taneously targets all four causes. It is clinically proven to provide complete, cost-effective relief of intertrigo symptoms within five days. This technology not only improves clinical outcomes for an appropriate variety of skin-to-skin and skin-to-device application sites, but also reduces treatment cost, promotes better patient experience and simplifies protocols. InterDry® is a proven approach for real relief.

Lower Leg Ulcers

Wound management is a considerable burden on health systems, in Canada and elsewhere, significantly impacting health and quality of life of individuals and their families (CIHI Compromised Wounds in Canada, 2013).
